**Engineering Mechanics:**

Dynamics provides a solid foundation of mechanics principles and helps students develop their problem-solving skills with an extensive variety of engaging problems related to engineering design. More than 50% of the homework problems are new, and there are also a number of new sample problems. To help students build necessary visualization and problem-solving skills ...

Our lab investigates fluid dynamics on the basis of uncluttered, simplified models. This enables us to unravel basic mechanisms and governing parameters. We focus on hydrodynamic instability applied to separated flows, coaxial jets and droplet formation, as well as droplet based microfluidics. Seminar News January 2021: New semester and master projects available.

Computational fluid dynamics - (CFD) is a branch of fluid mechanics that uses numerical analysis and data structures to analyze and solve problems that involve fluid flows. Computers are used to perform the calculations required to simulate the free-stream flow of the fluid, and the interaction of the fluid ( liquids and gases ) with surfaces ...

Introduction to Society. In 1900 a young anthropologist, John Swanton, transcribed a series of myths and tales – known as qqaygaang in the Haida language – told by the master Haida storyteller Ghandl. The tales tell stories of animal and human transformations, of heroes who marry birds, of birds who take off their skins and become women, of mussels who manifest the spirit form of whales ...
