A more simple ETRTO guidelines chart, courtesy of Schwalbe. For reference, a 62mm wide tire is 2.44", which is where the current standards formally end. But, with some calculations of the ETRTO standards, we came up with a rough guideline suggesting your rim width should be between 32% to 70% of the tire width.

[*Normadoc*](#)

The Engineering Design Information (EDI) of ETRTO is using formulas to calculate the possible tyre section + rim width combination, and ensure safety in all conditions. According to those formulas, the wider the rim gets, the broader the range of possible tyre gets, linked to lower tyre pressure.

Note: 35 psi is the assigned 'maximum load' pressure for standard load tires and 41 psi is the assigned 'maximum load' pressure for extra load tires. The above chart correctly shows that an extra load tire is not rated to carry any more load than a standard load tire when both are inflated to the same pressure (up to the standard load tire's 'maximum load' pressure of 35 psi).

Uden dæk kommer du ingen vegne. Det er måske ikke alle, der lige tænker over det, men valg af cykeldæk & slanger er ret afgørende for din ydelse og for din komfort. Normalt er dækkene monteret på cyklen ved køb, men går man bare en smule op i cykling, så finder man hurtigt ud af, at det kan være lidt af en videnskab at investere i nye dæk. . Det kan dog også være ganske simpelt ...
