It was 1961 when I installed my first computer, which was full of vacuum tubes and was the size of a Volkswagen. If I remember correctly, it had 20 KB memory. In 1965, scientists at MIT's Lincoln Laboratory figured out how two computers could communicate with one another and the age of the Internet ...

In electrical signalling an analog current loop is used where a device must be monitored or controlled remotely over a pair of conductors. Only one current level can be present at any time. A major application of current loops is the industry de facto standard 4–20 mA current loop for process control applications, where they are extensively used to carry signals from process instrumentation ...

The beginning of the "Manuscript Era," around 3500 BCE, marked the turn from oral to written culture. This evolution in communication corresponded with a shift to a more settled, agrarian way of life.Marshall T. Poe, A History of Communications: Media and Society from the Evolution of Speech to the Internet (New York, NY: Cambridge University Press, 2011), 61–73.
